

Shown With Optional 4-Link Plates

1/25th Scale

Strange Ultra 4-Link rear end parts list: Resin-center housing (1), axle bells (R&L), center section (1), brake calipers (4). 3D-hubs (2), housing bracket spacers (2), stabilizer tray (1), wishbone centering device (1). PE housing and chassis brackets (8), slotted rotors (2), caliper brackets (2), star-shaped caliper mounting rings (2) anti-roll device arms (4), stainless steel link tubes (4). Steel-formed wire rod ends (8), brass pin (1).

Refer to picture, at left, for identifying how parts assemble. Axle housing bell stubs may need to be shortened slightly to ensure there is no "wobble" when the bells are attached to the center housing. Bells are keyed so they can only be installed one way in center housing. Trial assembly is critical. 4-link brackets can be incorrectly oriented to the rear end.!!!
